1833 FARADAY in *Phil. Trans.* (1834) CXXIV. 79 Finally, I require a term to express those bodies which can pass to the *electrodes*, or, as they are usually called, the poles... I propose to distinguish these bodies by calling those *anions* which go to the *anode* of the decomposing body; and those passing to the *cathode*, *cations*; and when I have occasion to speak of these together, I shall call them *ions*. 1902 SIR J. J. THOMSON in *Encycl. Brit.* XXVIII. 26/1 We thus regard the conductivity of the gas as due to the presence of electrified particles... These particles we shall call *ions*, but they must not be assumed to be the same as the ions in the electrolysis of solutions. 1904 tr. *W. Nernst's Theoretical Chem.* (ed. 2) 394 If the velocity of the electron is very great, it may produce a relatively large number of positive and negative gas ions. 1909 J. W. JENKINSON *Exper.
